MEMORANDUM FOR THE RECORD

SUBJECT: Teletype 2500 CRT Display Device

The Office of Communications at the request of the DCI/NIPE Staff evaluated a number of CRT displays for use in the NIPL operations room, on the sixth floor of Headquarters, and in DASD(I)'s offices in the Pentagon. In the process one of the CRT's looked at was the teletype 2500. A prototype of this CRT is presently undergoing testing in Ames building.

The teletype 2500 has a 17 inch screen (25 by 80 character matrix), printer option (M37 teletype or teletype Inktronic), standard communications interface (150-9600 baud), edit features (character and line insert and delete, cursor control), large easy to read characters and the option of expandable storage at the terminal.

The unit can be seen at any time in the Ames building and the Office of Communications people have expressed an interest in testing the terminal with one of the 360 computers in OCS. I have passed this information on to [redacted] along with the name of the Commo contact for further action.
